

WHAT ARE THE **RISKS** WHEN VISITING **PIRATE** **WEBSITES?**

POPUPS

- ◆ Pirate sites make profits out of pop-up advertisements or by hosting malware.
- ◆ Pop-ups on pirate sites are aggressive, annoying, completely unmoderated, and very often contain inappropriate content.
- ◆ They will hinder your internet browsing and expose younger family members to images which are explicit or violent.

MALWARE

Viruses, Worms, Spyware, Trojans gather data from your computer or even try to control it putting your personal and financial information at risk.

In pirate websites there is no way of knowing who you are getting the files from and if these files are infected with malware.

Downloading infected files can lead to slow internet connection, stolen personal information even remote access to your computer and camera.

Pirated software will most certainly contain malware, resulting in **poor performance** or even **FAILURE**.

KEEP YOUR **HARDWARE, SOFTWARE AND PERSONAL DATA SAFE.**
USE **LEGAL SOURCES** FOR STREAMING AND DOWNLOADING.
